Functions

وظائف

Functions

- A function is a **block of code** which **only runs when it is called**
- Functions are important for **reusing code**
- **Define the code once, and use it many times**

Functions

```
// Create a function
```

```
void myFunction() {  
    printf("I just got executed!");  
}
```

```
int main() {  
    myFunction(); // call the function  
    return 0;  
}
```

```
// Outputs "I just got executed!"
```

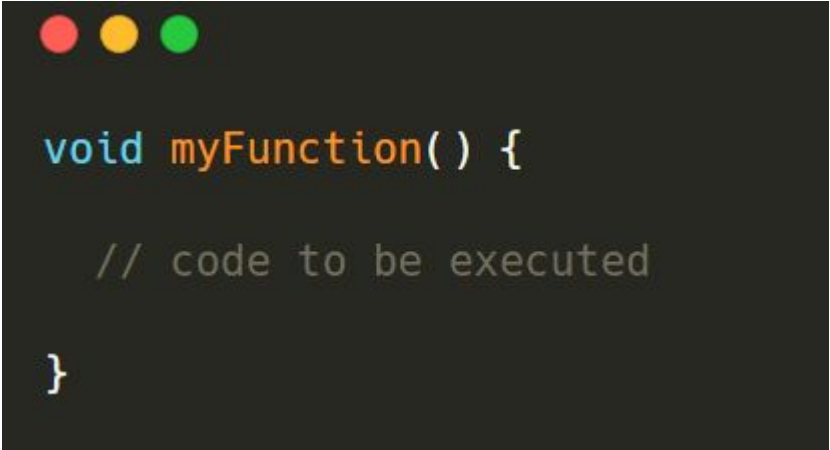

I just got executed!

Create Function

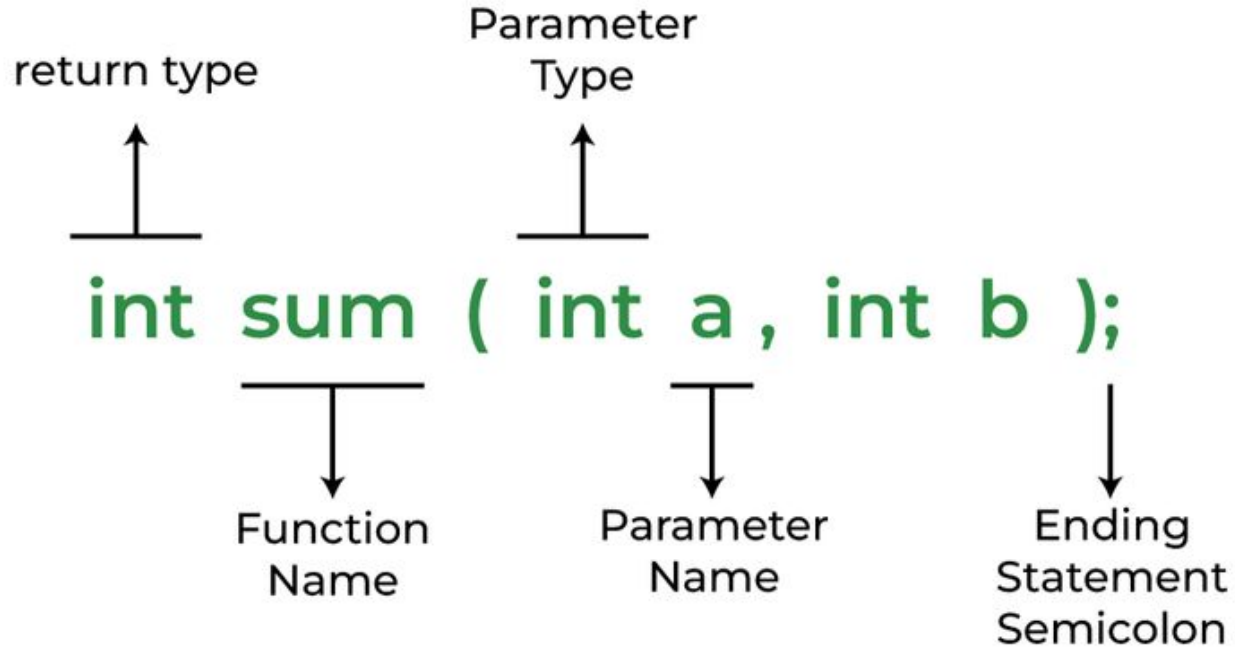

To create a function, we need to specify :

1. **Return type**
2. **The name of the function**
3. **The parameters**

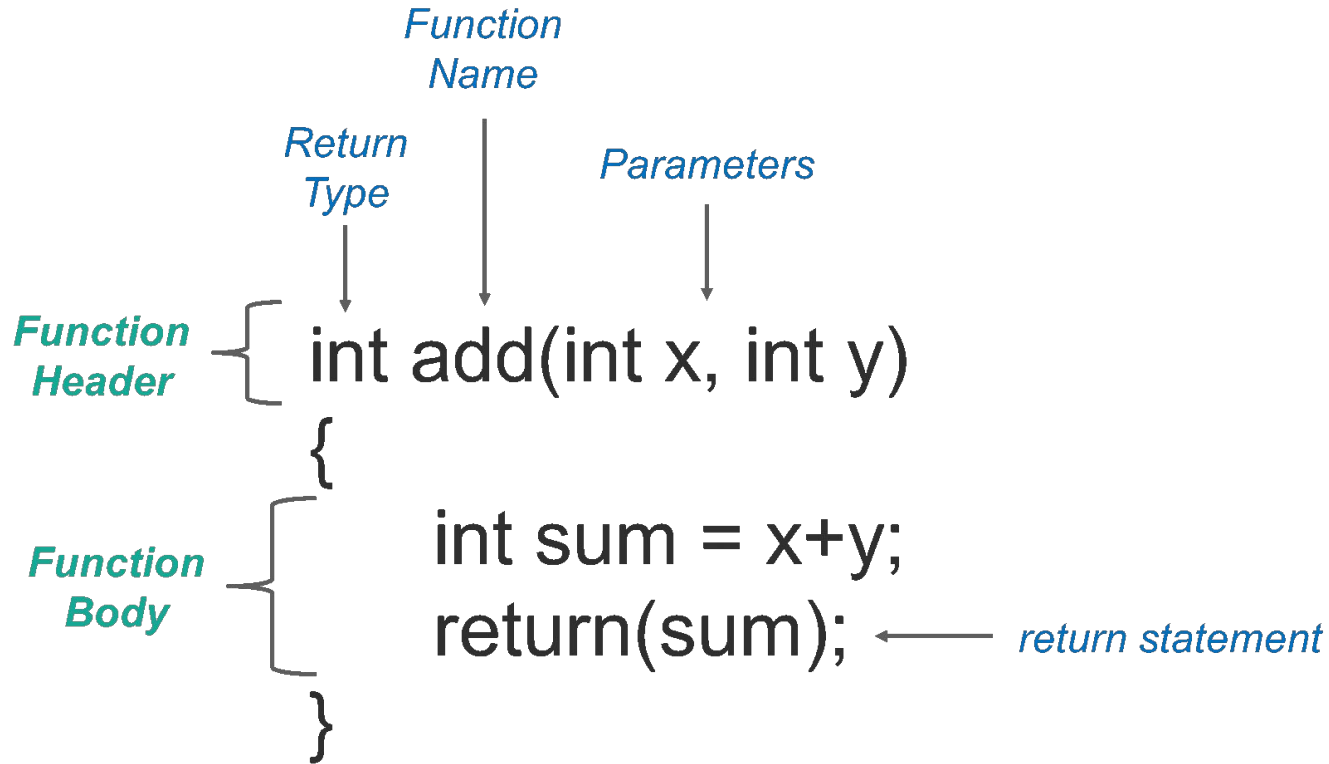

```
void myFunction() {  
    // code to be executed  
}
```

Function Declaration

Function Definition

Function Example

```
int myFunction(int x) {  
    return 5 + x;  
}
```

```
int main() {  
    printf("Result is: %d", myFunction(3));  
    return 0;  
}
```

```
// Outputs 8 (5 + 3)
```
