

6. Applications

you use the term applications to describe **digital tools** or **systems** that help you execute a **specific task** or **process**:

- they support work activities
- they improve execution speed
- they reduce errors
- they guide how you interact with information and services

6.1 Communication spaces

you use communication spaces to exchange information and interact with others inside or outside your organization.

Examples include Internet, Intranet, and Extranet.

you share data, send messages, and access common resources through these spaces.

6.1.1 Internet

- you connect to public global information.
- you search resources.
- you communicate with external users.
- you access cloud services and online platforms used by companies and universities.

Example: you search research papers on Google Scholar and you access public documentation

6.1.2 Intranet

- you connect to private internal information inside your organization
- you access internal documents
- you consult internal rules, procedures, and shared tools only available for members

Example: You open the internal portal of your university to download internal regulations or internal course support not available to the public.

6.1.3 Extranet

- you extend internal access to selected external partners.
- you collaborate with suppliers, clients, or academic partners.
- you share specific resources without opening full internal access to everyone.

Example: A university gives access to a partner company to upload internship evaluations and follow the student internship progress.

6.2 Multimedia

- ✓ you use multimedia to combine several forms of digital content such as text, audio, images, and video
- ✓ you improve communication and interaction
- ✓ you support collaboration when teams work remotely
- ✓ you reduce travel time and allow real time sharing of information

Multimedia includes two main collaboration tools: audioconferencing and videoconferencing

6.2.1 Audioconference

- ✓ you communicate only with voice in real time
- ✓ you can run short meetings with remote participants

Example

Technical support team meets every morning by phone call to synchronize tasks. There are more applications such as:

- Google Meet audio mode
- Microsoft Teams audio only meeting
- Skype audio call

- classic phone conference call between remote teams.

6.2.2 Videoconference

- ✓ you communicate with voice and video
- ✓ you see reactions and screen share content

Example

research group uses Zoom to present experiment results and discuss corrections before writing the paper. There are more applications such as:

- Google Meet video meeting
- Microsoft Teams video meeting
- Zoom meeting with screen sharing
- Cisco Webex for academic or company presentations

6.3 Electronic Data Interchange (EDI)

you exchange structured business documents directly between information systems without manual entry.

- ✓ you reduce human mistakes
- ✓ you accelerate transaction processing

Examples

- a supplier receives automatic purchase orders from a company ERP system.
- a transport company sends delivery status updates automatically to customers system.
- a bank sends payment confirmation messages to another organization system.

- customs exchange import export declaration data digitally with companies.

6.4 Workflows

- ✓ you organize a sequence of steps to complete a business process.
- ✓ you automate actions.
- ✓ you ensure that every task follows the same order and rules.

Examples

- leave request workflow inside a company where employee submits, HR checks, manager approves
- university project validation process where teacher submits, department validates, administration signs
- purchase request workflow where team requests equipment, finance verifies budget, director approves and sends order

Examples of workflow applications

- Trello: you create boards, lists, and cards to manage task progression
- Jira: you follow software development steps in agile projects
- Microsoft Power Automate: you automate company processes and approvals inside Microsoft 365
- Monday.com: you track tasks and status for team operations
- Asana: you coordinate tasks, deadlines, and responsible persons in one shared space
