

Workshop n°1: Discovering Linux and Installing it in a Virtual Machine

Practical workshop on discovering Linux and installing a distribution in a virtual machine, structured in several parts:

Part 1: General knowledge about Linux

1. What is an operating system?
2. What is the difference between Linux and Windows?
3. Is Linux an operating system or a kernel? Explain.
4. What does "free software" mean?
5. Name at least three Linux distributions.
6. What is a Linux distribution?
7. Why is Linux considered more secure?
8. In which areas is Linux primarily used?

Part 2: Virtualization

9. What is a virtual machine?
10. What is the benefit of using a virtual machine to install Linux?
11. Name two virtualization software programs.
12. What is the difference between a physical machine and a virtual machine?
13. What are the advantages and disadvantages of virtualization?

Part 3: Preparing for Installation

14. Which virtualization software did you use?
15. Which Linux distribution did you choose? Why?
16. What type of file is used to install Linux (ISO)?
17. How much RAM did you allocate to the virtual machine?
18. What size virtual hard disk did you choose?
19. What type of virtual disk did you select (dynamic or fixed)?

Part 4: Practical Installation

20. Describe the main steps of the installation.
21. What type of installation did you choose (disk wipe, manual installation, etc.)?
22. Did you create a user? Why is this important?
23. What is the administrator (root) password?
24. Did you encounter any difficulties? What were they?
25. How long did the installation take?

Part 5: Exploring the Linux Environment

26. Which desktop environment did you use (GNOME, KDE, XFCE, etc.)?
27. How do you open the terminal?
28. Which command displays the contents of a folder?
29. Which command displays the current path?
30. Which command creates a folder?
31. Which command installs software?
32. What is the difference between a graphical interface and a terminal?

Part 6: Analysis and Reflection

33. Compare your experience with Linux and Windows.
34. What are the advantages of Linux in your opinion?
35. What are the disadvantages?
36. Would you recommend Linux? Why?

Note: Working in a group means succeeding together: listen to each other's ideas, share responsibilities fairly, and support one another to achieve a common goal.

Good luck
